

Office Memorandum • UNITED STATES GOVERNMENT

TO : Chief, Administrative Services

FROM : Acting Chief, Records Control Section

SUBJECT: Microfilming as a Means of Economy

DATE: 5 April 1951

1. As of 1 March 1951, there had been microfilmed in connection with the Records Reduction aspect of the Records Management Program, a total of 573,828 documents occupying 239 cubic feet of space. It is believed this represent a saving of more than \$1,000 a year, for at least ten years.

2. The cost of microfilming these records, at an estimated \$7.25 a cubic foot amounted to \$1,732. Had these records been retained in original form, it would have cost CIA \$5.31 a cubic foot or \$1,269 a year to keep these records in the respective offices.

3. These documents were of such significance that it is believed they would have been retained in the offices for ten or more years. The cost of retaining the records in original form for 16 months is about equal to the microfilming cost. Over a period of ten years a saving of nearly \$11,000 can be estimated from microfilming.

4. However, if operational conditions had been such as to permit storage in the Records Center, the cost of maintaining them in original form would be \$.53 a cubic foot a year, or \$1773 for thirteen years. As a generality, it can be stated that CIA can store records in original form in warehouse type space for twelve or thirteen years as cheaply as it can microfilm them to permit immediate destruction.
